DETAILED ACTION

1. Applicants are reminded to update the continuity data.
2. Claims 1 and 2 of the instant Application are directed to a compound that is called Thioglycerol. This is commercially sold product, and the product identified in CAS registry. CAS RN 96-27-5. Claiming a known compound which is used as a catalyst for bulk polymerization, is nothing more than an intended use of a known and commercially available compound, wherein the preamble merely states the purpose or intended use of the invention, rather than any distinct definition of any of the claimed invention's limitations, then the preamble is not considered a limitation and is of no significance to claim construction. *Pitney Bowes, Inc. v. Hewlett-Packard Co.*, 182 F.3d 1298, 1305, 51 USPQ2d 1161, 1165 (Fed. Cir. 1999). See also *Rowe v. Dror*, 112 F.3d 473, 478, 42 USPQ2d 1550, 1553 (Fed. Cir. 1997) ("where a patentee defines a structurally complete invention in the claim body and uses the preamble only to state a purpose or intended use for the invention, the preamble is not a claim limitation"), see also *Kropa v. Robie*, 187 F.2d at 152, 88 USPQ2d at 480-81). Consult MPEP 2111.02.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1713

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Hicks (U.S. 3,960, 824).

Hicks (U.S. 3,960, 824) discloses a **bulk polymerization** process of making low molecular weight polymers of ethylenically unsaturated monomers (acrylic monomers) by a using **organic mercaptans as the polymerization catalysts**. (see abstract). Specific Example 6 in col. 9, lines 40-65 discusses the copolymerization of acrylic esters in the presence of **1-thioglycerol** (line 46), as a catalyst.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yoshida et al (U.S. 5,574,117).

Yoshida discloses an acrylic polymer, which is obtained **by the bulk polymerization** in the presence of thiol compound such as **2-mercaptoethanol**; diesters between diols, such as **ethylene glycol and 1,4-butanediol**, and mercaptans having a **carboxyl group, compounds having three or more of mercapto groups such as trithioglycerol** and the like.
